Kaspersky Protects the Most Vulnerable Data of Any Organization with Security for Mail Servers

Kaspersky Lab's new Security for Mail Servers will make sure your email never requires a second thought. This year, we have added Kaspersky Security 8.0 for Exchange Servers and Kaspersky Anti-Virus 8.0 for Lotus Domino, complementing our Anti-Virus for Linux Mail Server, Kaspersky Mail Gateway, and Kaspersky Anti-Spam for Linux offerings.

High Performance Protection

- Security that won't bog-down a complex infrastructure
- Premium technology for small businesses investing in security and speed to eliminate malware
- Reliable, uninterrupted performance
- Consistently top-notch detection rates, validated by third-party test organizations
- Boost IT staff productivity with easy-to-manage security software
- On-premise protection to keep your data safe
- Round-the-clock technical support

NEW! Kaspersky Security 8.0 for Exchange Servers

Kaspersky Lab technology has been at the core of Microsoft's Forefront, and our 8.0 application introduces new performance and security gains that aren't available from any other vendor's offering

- New spam detection capabilities
- Flexible scan configuration for optimum performance
- Real-time protection from the latest malware threats
- Application performance reporting system
- Customizable logs, notifications
- Easy administration through the Microsoft Management Console (MMC)
- Support for Microsoft Exchange 2010 and Microsoft Windows 2008 R2

NEW! Kaspersky Anti-Virus 8.0 for Lotus Notes

The performance demands of Lotus Domino Server solutions require intelligently-constructed protection that does not slow corporate workflow across complex enterprise infrastructures. This application includes the following new features:

- Group management of anti-virus policies
- Message tagging and notification system
- Role-based administration
- Simple database updates
- Support for Lotus Domino 8.5x; Linux Red Hat 4.x and Red Hat 5.x, and SLES 9, 10x and 11x
