Cymphonix iPhone Application

Cymphonix extends Internet traffic visibility to users "on the go" through its iPhone® application. The application provides mobile users the ability to conduct real-time monitoring and detailed application, web, and user reporting of their organization's Internet traffic from the convenience of their iPhone® and iPod touch® devices. The application connects directly to a Cymphonix Network Composer® Secure Web Gateway appliance to provide access to critical Internet and user data - anywhere and anytime.

Product Description

Do you get asked to troubleshoot Internet traffic issues when you're away from your desk? Are you getting calls from home to research Internet incidents or bandwidth resource issues? With a simple to use interface and real-time reporting directly from your Network Composer(s), the Cymphonix iPhone Application lets you report, monitor, and diagnose problems wherever you may be.

Total Visibility - get your favorite Network Composer reports at home, on the bus, or on the beach. With the touch of a finger, gain access to these powerful reports. Let Cymphonix Network Composer do the heavy lifting and reap the rewards of total visibility into your Internet traffic through your iPhone:
